Supplement to the 2013 FDA Food Code

The Food Code (and its Supplement) is a model for safeguarding public health and ensuring food is unadulterated and honestly presented when offered to the consumer. It represents the Food and Drug Administration's (FDA) best advice for a uniform system of provisions that address safety and protection of food offered at retail and in food service.

This model is offered for adoption by local, state, territorial, tribal, and federal governmental jurisdictions for administration by the various departments, agencies, bureaus, divisions, and other units within each jurisdiction that have been delegated compliance responsibilities for food service, retail food stores, or food vending operations.

Introduction

The Food and Drug Administration (FDA) is pleased to issue this Supplement to the 2013 Food Code (hereafter referred to as Supplement). This Supplement updates the 2013 Food Code to address several recommendations made at the 2014 Meeting of the Conference for Food Protection (CFP) with which the FDA, Centers for Disease Control and Prevention (CDC), and United States Department of Agriculture (USDA) concur. The changes contained in this Supplement reflect current science and food safety practices to reduce the incidence of risk factors known to cause foodborne illness.

From 1993 through 2001, the complete Food Code was issued every two years. With the support of the CFP, FDA currently issues a new Food Code every 4 years. The next complete revision of the Food Code will be published in 2017. Until that time, this Supplement provides a means of incorporating into the Food Code several changes with which there is substantial concurrence among the federal agencies and the other stakeholders. The Supplement ensures that the most current food safety provisions are available to agencies planning to initiate rule-making activities prior to 2017. This Supplement provides other users of the Food Code, such as educators, trainers, and the food service, retail food, and vending industries, with up-to-date information of how to best mitigate risk factors that contribute to foodborne illness.

The Supplement has been organized to facilitate the adoption of its provisions by federal, state, local, territorial, and tribal authorities. The Supplement is divided into 3 Parts:

- Part 1 - Summary of Changes - a "quick view" of the modifications
- Part 2 - Amendments, Additions, Deletions to the Preface, Chapters 1-8 and the Annexes - actual language modifications
- Part 3 - New Terms added to the Index to the Food Code

For consistency, drafting conventions used in the Federal Register for announcing proposed changes to federal rules are used to announce changes found in the Supplement to the 2013 Food Code. The standard terms used to describe a change are:

Amend. "Amend" means that an existing Food Code provision has changed. Because it is an introductory term, it is always used with one of the following specific amendatory terms to precisely describe the change to the Food Code provision.

Amendatory Terms

Add - means a new provision has been inserted in the Food Code.

Redesignate - means to modify a Food Code provision by reformatting the text of the provision into a new structural nomenclature designation.

Remove - means an existing provision is being taken out of the Food Code.

Revise - means an existing Food Code provision is replaced in part, or in its entirety.

For example:

Amend Section 4-204.110 to **revise** subparagraph (B)(1) and to **add** subparagraph (B)(3) to read as follows: [text of changed subparagraph and newly added subparagraph]

Modifications are organized by Food Code chapter and are identified by Section (§) number and title, and the paragraph (¶), (e.g., ¶9-101.11(A)) or subparagraph (e.g., 9-101.00(A)(1)) to which the change is made. The full text of a Section is provided only if necessary to provide the proper context. Using Chapter 3 as an example, a change is introduced as follows:

Chapter 3 - Food

Amend § 3-202.11 to revise paragraph (D) to read as follows:

Specifications for Receiving **3-201.11 Temperature.***

[text of changed paragraph]

The Supplement also contains changes to the informational annexes of the Food Code. Using Annex 3 as an example, a change to the public health reasons for a Food Code provision in Chapter 4 is introduced as follows:

Annex 3- Public Health Reasons/ Administrative Guidelines

4-202.15 - Can Openers.

Amend Public Health Reason for §4-202.15 to revise to read as follows:

[text of changed paragraph]

We encourage all jurisdictions to examine the level of food safety protection their current rules and implementation strategies provide and take the steps necessary to increase that level in light of the 2013 Food Code and its Supplement. The adoption and implementation of the Food Code in all jurisdictions is an important strategy for achieving uniform national food safety standards and for enhancing the efficiency and effectiveness of our nation's food safety system.

The Department of Health and Human Services (DHHS) and USDA, along with state, local, tribal and other federal government agencies and the food industry, share responsibility for ensuring that our food supply is safe. DHHS and USDA, in partnership with numerous others, will continue to take progressive steps to strengthen our nation's food safety system. We look forward to achieving uniform and effective standards of food safety for food service, retail stores, and other retail-level establishments nationwide.

Part 1. Summary of Changes

- delete paragraph (C) and move the food employee and supervisory training plan provision to new paragraph (E);
- redesignate existing paragraph (A) as new paragraph (B) where the intent of paragraph (B) remains the same, although the paragraph was revised to remove the list of examples;

- Minor changes were made to subparagraph (D)(3) to clarify that a food employee or person in charge may monitor critical control points. The previous codified language implied that a food employee, rather than the person in charge, must monitor the critical control points. - Minor changes were made to subparagraph (D)(5) to clarify that a person in charge, or a food employee, may be responsible for taking corrective action when a critical limit is not met. The previous codified language implied that the person in charge needed to take action when critical limits were not met. In some operations, a designated food employee may be responsible for taking correction action when critical limits are not met; and
- revise paragraph (E) to incorporate the food employee and supervisory training plan from deleted paragraph (C) and include a new requirement for the permit holder's or permit applicant's HACCP plan submission to incorporate copies of blank records forms necessary for implementation of the HACCP Plan.

Annex 3- Public Health Reasons/Administrative Guidelines

Chapter 1 -Purpose and Definitions

No Change in Annex 3, Public Health Reasons, for Chapter 1.

Chapter 2- Management and Personnel

Amend Public Health Reasons for §2-103.11 to add a new paragraph 5 and revise paragraphs 7 and 8 to update the references to paragraphs 2-103.11(M) and (N) to

paragraphs (N) and (O) respectively, to reflect the redesignation in § 2-103.11 to read as follows:

Duties-2-103.11-Person in Charge

Paragraphs (1)-(4) - No Change.

New Paragraph 5: An important duty of the Person in Charge is to make sure that any required temperatures are achieved or maintained when foods are cooked, cooled or held in a food establishment. By making it a duty of the Person in Charge to ensure that employees are monitoring food temperatures to verify the critical temperature limits, the likelihood of temperature abuse is reduced. This includes oversight of temperature monitoring to ensure: 1) that animal foods are being cooked to the required minimum temperatures to prevent the survival of pathogens that may be present (2-103.11(G)); 2) that cooked foods are being cooled rapidly to ensure that the growth of bacterial pathogens and toxin production is prevented (2-103.11(H)); and 3) that foods that require temperature control for safety are being held at temperatures that adequately prevent pathogen growth and toxin production (new 2-103.11(I)).

Paragraph (N) “EMPLOYEES are properly trained in FOOD safety, including food allergy awareness, as it relates to their assigned duties” allows industry to develop and implement operational-specific training programs for food employees. It is not intended to require that all food employees pass a test that is part of an accredited program.

Paragraph (O) emphasizes the important role the Person in Charge (PIC) has in making sure employees properly report certain information about their health status as it relates to diseases that are transmitted by food. In an effort to reinforce dialogue between food employees and the PIC, there must be a way to verify that food employees and conditional employees are informed of their responsibility to report such information. Examples of ways to verify that employees have been appropriately informed include:

Responsibilities and Reporting Symptoms and Diagnosis

2-201.11-Responsibility of the Person in Charge, Food Employees, and Conditional Employees.

Paragraphs (1) – (4)-No Change.

Reporting Symptoms:-No Change.

Title I of the Americans with Disabilities Act of 1990 (ADA)

Amend Public Health Reason for §2-201.11, Title I of the Americans with Disabilities Act of 1990 (ADA) in paragraph 3 and paragraph 4 (Example 1) to read as follows:

Paragraphs (1) and (2) -No Change.

A food employer may exclude any employee under the Food Code upon initially learning that the employee has Typhoid fever (caused by *Salmonella Typhi*), or has a gastrointestinal symptom listed in the Food Code. The excluded employee may then ask for an ADA reasonable accommodation instead of the exclusion. In response, the employer's first step should be to ask the employee to establish that the employee is disabled by the disease or symptom (or that the symptom is caused by another ADA disability). If the employee successfully proves that the employee has an ADA disability, then the employer may continue to exclude the employee under the Food Code if:

- there is no reasonable accommodation at work that would eliminate the risk of transmitting the disease while also allowing the employee to work in a food handling position, or
- all reasonable accommodations would pose an undue hardship on the employer's business; and
- there is no vacant position **not involving food handling** for which the employee is qualified and to which the employee can be reassigned.

Example 1: A food employee working in the café of a department store informs the employer that the employee has been diagnosed with Typhoid fever (caused by *Salmonella Typhi*). The employer immediately excludes the employee under the requirements of the Food Code. The employee then establishes that the disease is an ADA disability because it is severe and long-term and the employee requests reasonable accommodation instead of an exclusion. The employer determines that no reasonable accommodation would eliminate the risk of transmitting Typhoid fever (caused by *Salmonella Typhi*) through food and refuses to remove the exclusion. However, there is a vacant clerical position in another part of the store for which the employee is qualified. Unless the employer can establish that reassigning the employee to this position would be an undue hardship, the employer's failure to make the reassignment instead of continuing the exclusion would be a violation of the ADA.¹

Paragraphs (5) – (11) -No Change.

Pathogens Transmitted by Food Contaminated by Infected Persons Who Handle Food, and Modes of Transmission of Such Pathogens-No Change.

Chapter 3-Food

¹ Whether or not the employee in question is an individual with an ADA disability, in those jurisdictions where the Code is adopted, Food Code exclusions or restrictions must be removed when requirements for removal under § 2-201.13 of the Code are met.

No Change in Annex 3, Public Health Reasons, for Chapter 3

Chapter 4-Equipment, Utensils, and Linens

Amend Public Health Reason for Chapter 4 Equipment, Utensils, & Linens, to add public health reasons for new §4-303.11 to read as follows:

4-303.11 Cleaning Agents and Sanitizers, Availability

If the appropriate cleaning agents and sanitizers are not on hand at all times they may not be available when needed to clean and sanitize equipment and utensils. It is also important that the cleaning agents and sanitizers be on hand, even at times where warewashing may not be in progress, so that their suitability can be verified by the regulatory authority and, if needed, by personnel who are responsible for servicing the equipment.

Chapter 5-Water, Plumbing, and Waste

No Change in Annex 3, Public Health Reasons, for Chapter 5.

Chapter 6-Physical Facilities

No Change in Annex 3, Public Health Reasons, for Chapter 6.

Chapter 7-Poisonous or Toxic Materials

No Change in Annex 3, Public Health Reasons, for Chapter 7.

Chapter 8-Compliance and Enforcement

Construction Inspection and Approval

8-201.12-Contents of the Plans and Specifications.

8-203.10-Preoperational Inspections.

Amend Public Health Reason in paragraph 10 to read as follows:

Paragraphs (1) – (9)- No Change.

During the plan review stage, the regulatory authority and a management representative of the proposed food establishment should discuss available training options that may be used to train food employees and the person in charge regarding food safety as it relates to their assigned duties. By the time of the preoperational inspection, operating procedures for training should include definitive practices and expectations of how the management of the proposed food establishment plans to comply with paragraph 2-103.11(N) of this Code which requires the person in charge to assure that food employees are properly trained in food safety as it relates to their assigned duties.

8-403.50-Public Information

Amend Public Health Reason for Chapter 8 Compliance and Enforcement to add public health reasons for §8-403.50 Public Information to read as follows:

Regulatory documents that describe the compliance status of a regulated food establishment may be of particular interest to consumers, academia, industry, and other regulators. Certain laws may obligate government entities to make regulatory documents available to the public upon request. Proactively making these documents available to the public, by way of a website, may reduce the burden associated with requesting these documents, and therefore make it more likely that these documents will be accessible and reviewed by interested stakeholders.

Annex 4-Management of Food Safety Practices – Achieving Active Managerial Control of Foodborne Illness Risk Factors

Annex 5-Conducting Risk-based Inspections

Annex 6-Food Processing Criteria

Amend Annex 6, Food Processing Criteria, 2. Reduced Oxygen Packaging, Section (I), Hazard Analysis and Critical Control Point (HACCP) Operation, to revise the introductory paragraph to replace the existing cross reference to ¶8-201.14(D) with a cross reference to §8-201.14 to read as follows:

(I)-Hazard Analysis and Critical Control Point (HACCP) Operation

All food establishments packaging food in a reduced oxygen atmosphere must develop a HACCP plan and maintain the plan at the processing site for review by the regulatory authority. For ROP operations, the plan must include the requirements specified under § 8-201.14. In addition, the HACCP plan may also include:

- (1) A complete description of the processing, packaging, and storage procedures designated as critical control points, with attendant critical limits, corrective action plans, monitoring and verification schemes, and records required;
- (2) A list of equipment and food-contact packaging supplies used, including compliance

standards that may be required by the regulatory authority, i.e., a recognized third party equipment evaluation organization such as NSF International;

(3) A description of the lot identification system;

(4) A description of the employee training program;

(5) A listing and proportion of food-grade gasses used; and

(6) A standard operating procedure for method and frequency of cleaning and sanitizing food-contact surfaces in the designated processing area.
